

ABSTRACT

Magnetic work apparel for retaining various fasteners or tools such as nails, screws, nuts, bolts and drill bits includes a hollow glove member having a backhand portion, a palm portion, a wrist portion defining an opening for receiving a user's hand and a plurality of finger portions. Integral with the backhand portion is a magnet to which ferromagnetic items may be secured to keep such items in a readily accessible location. The invention also includes several magnetic accessory items such as a wristband, a belt and a belt clip. The belt includes snaps or similar fasteners thereon for securing the other items thereto.
